# Build a Web application without writing any code, Part 1

Install and configure Rational Application Developer, DB2, and WebSphere Application Server

Skill Level: Intermediate

[Eric Long \(elong@us.ibm.com\)](mailto:elong@us.ibm.com)  
Software Engineer  
IBM

11 Sep 2007

Learn how to build a robust Web application. In this tutorial, learn how to install, set up, and configure trial versions of Rational® Application Developer for WebSphere® Software, DB2® Enterprise V9.0, and WebSphere Application Server V6.1. In Part 2, you will use Rational Application Developer to build a Web application using data from a DB2 database, and publish your page to a WebSphere Application Server, all without writing any code. IBM's middleware takes care of all the hard work so you can focus on your own unique business logic.

## Section 1. Before you start

### About this tutorial

If you are a Web application developer, enterprise application developer, XML developer, or someone curious about new IBM technologies and tools, this series is for you.

This tutorial describes how to install and configure Rational Application Developer, DB2, and WebSphere Application Server.

In Part 2 of this series, you will begin creating a Web application without writing any code.

## Objectives

In this tutorial, learn how to install and set up Rational Application Developer for WebSphere Software, DB2 Enterprise V9, and WebSphere Application Server V6.1. You will also configure these technologies to begin creating a Web application (which you'll finish in Part 2).

## Prerequisites

This tutorial assumes you have some understanding of Java, SQL, and XML. Knowledge of Web design is helpful, but not required.

## System requirements

None

## Product descriptions

In this two-part series you will be installing and using the following IBM products:

### **Rational Application Developer for WebSphere Software V7.0**

The IBM Rational Application Developer for WebSphere software application helps Java™ developers create Java/Java Platform, Enterprise Edition (J2EE), portal, Web, Web services, and Service-Oriented Architecture (SOA) applications. This integrated development environment helps you to rapidly design, develop, assemble, test, and deploy these applications.

The Rational Application Developer visual tools can be leveraged to reduce manual coding by abstracting the J2EE programming model, making it easier for those less familiar with Java technology to complete development projects. It is designed to be a highly flexible development tool based on the Eclipse open framework, with a range of flexible installation options.

### **DB2 Enterprise V9.0**

DB2 9 (formerly known as Viper) is a leading edge hybrid data server capable of supporting both relational and pureXML™ storage. pureXML provides seamless integration of XML with relational data that speeds application development, improves search performance with highly optimized XML indexes, enables information as a service, and is flexible because both SQL and XQuery can be used to query XML data.

### **WebSphere Application Server V6.1**

IBM WebSphere Application Server V6.1 is the foundation of the IBM WebSphere software platform, and a key building block for a Service-Oriented Architecture (SOA). As the premier Java 2 Enterprise Edition (J2EE™) and Web services application platform, WebSphere Application Server V6.1

delivers a high performance transaction engine that can help you build, run, integrate and manage dynamic, On Demand Business™ applications.

---

## Section 2. Rational Application Developer installation and setup

To install and set up Rational Application Developer for WebSphere Software:

1. Begin by downloading Rational Application Developer. Navigate a Web browser to <http://www.ibm.com/developerworks/downloads/r/rad/>, as shown below.

**Figure 1. Trial download page**

# Trial: Rational Application Developer for WebSphere Software V7.0

[Learn](#) | [Try](#) | [Buy](#) | [Support](#)  
[Download](#) | [Online trial](#)

You can download a free trial version of Rational Application Developer for WebSphere Software or [try it online](#).

## Trial download

The evaluation period for this trial is 60 days.

This trial has all features enabled. However, some add-on components included in the for-purchase version of this product are not included in the download. These include:

- Crystal Reports Server 11
- CTG V6.0.2
- DB2 Express Edition V9.1
- Rational Agent Controller
- Rational ClearCase LT V7.0
- WebSphere Portal V5.1.0.3
- WebSphere Portal V6.0

### Requirements

- ➔ [System requirements](#)

developerWorks is conducting a pilot of a simpler, more flexible download and install program called IBM Installation Manager. As a result, for Rational Application Developer, there are two options for downloading your trial: Installation Manager, or Download Director.

### Download using the new IBM Installation Manager (recommended)

IBM Installation Manager downloads and installs Rational trial software. With Installation Manager, you can choose the components of a trial you want to install, and you can even install and manage multiple trials at once. Download and then run Installation Manager to install the software described on this page. After the installation is complete you can modify, update, or uninstall the trial software using the Installation Manager (on Windows® platforms, use **Start > All Programs > Installation Manager**). The estimated download time using Installation Manager over a 1.5Mbps connection is 5 hours, 0 minutes. Learn more about this application in the [Installation Manager FAQ](#).

To download using Download Director or HTTP, click the **Multiplatform** link below. The estimated download time using Download Director over a 1.5Mbps connection is 9 hours, 4 minutes. Download Director, which requires a Java-enabled browser, provides pause-and-resume capability, high-speed transfer, and file access through firewalls.

Operating system	Version	Size	Download method
<a href="#">Multiplatform</a>	V7.0	5073MB	HTTP   Download Director

2. Click the **Multiplatform** download link at the bottom of the panel.
3. Yes, you do have to sign in with developerWorks to access the trial download.

**Figure 2. developerWorks sign in**

# Rational Application Developer

## Sign in

This site requires all users to sign in with IBM IDs and passwords, which can be used site-wide. You will need an IBM ID to continue. (If you have a PartnerWorld® or developerWorks™ user ID, that is considered your IBM ID).

Users who have completed the IBM registration process, sign in here.

 [Sign in](#)

---

If you do not have a universal IBM user ID, please [register now](#), then return to sign in for this offering.

To find out more about the benefits of having an IBM Registration ID, visit the [IBM ID Help and FAQ](#).

4. Follow the steps for the sign in process until you arrive at the download page.
5. From the download page, select all of the check boxes to install the full version of Rational Application Developer. This is a very large download, but you can customize which sections you want to download, if you want.

 [Download now](#)

6. Depending on your internet connection and how many options you selected, this might be a good time to get a cup of coffee or watch your favorite movie trilogy.

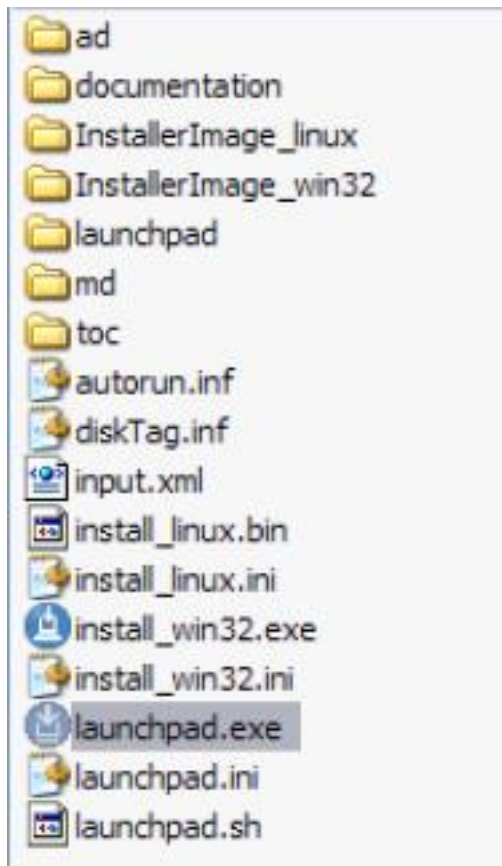

After all of your files have downloaded, begin the installation process.

7. Navigate to the directory of the downloaded files. (If you used Download Director, go to C:\DownloadDirector.)
8. Open the directory to see the downloaded disks.

**Rational Application Developer download directory**

9. Double-click **disk1** to open the folder.
  10. Double-click **launchpad.exe**.
- Figure 5. Rational Application Developer launchpad**

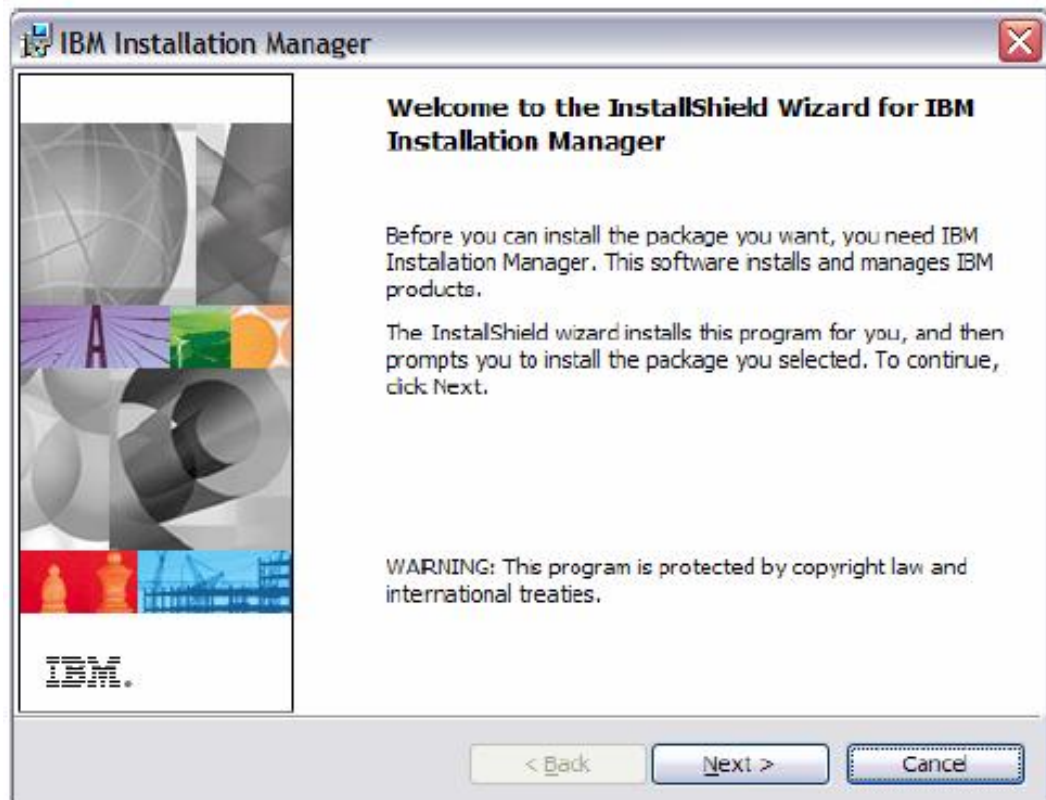

11. Click **Install IBM Rational Application Developer v7.0**.  
**Figure 6. Rational Application Developer installation**

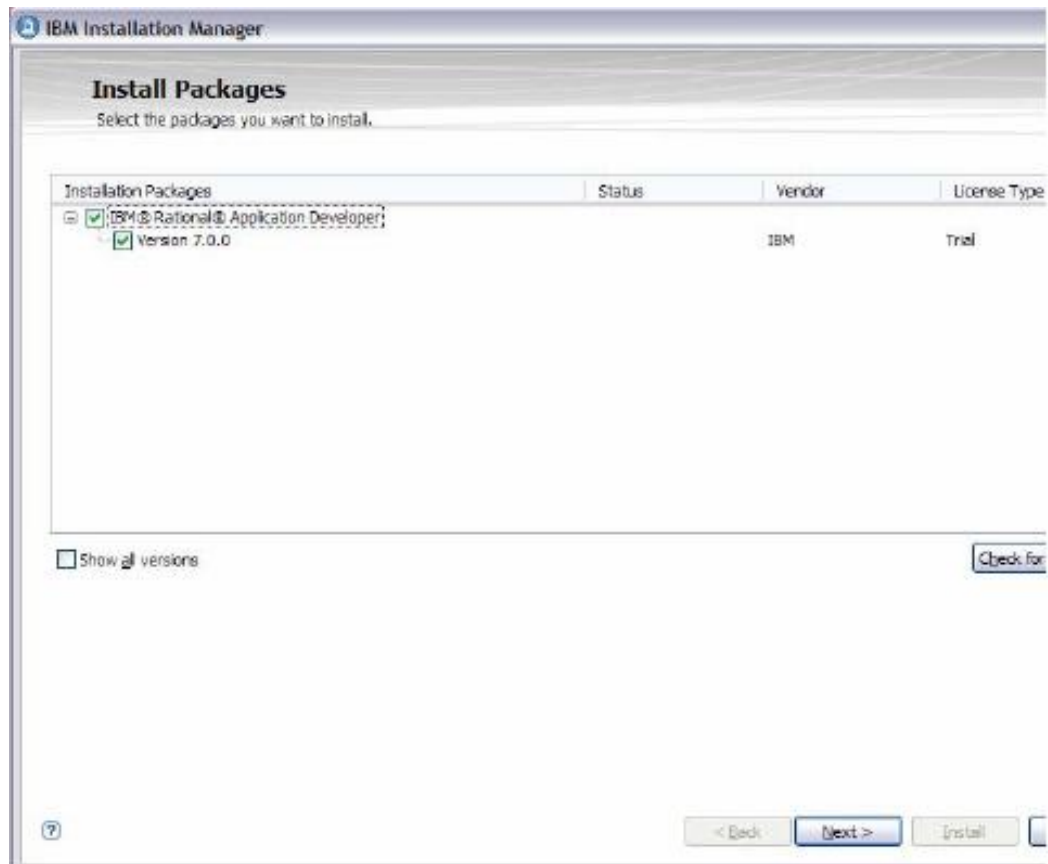

12. If this is your first time downloading an IBM product, you will be prompted to install the Installation Manager.
13. Click **Next**.  
**Figure 7. Installation Manager wizard**

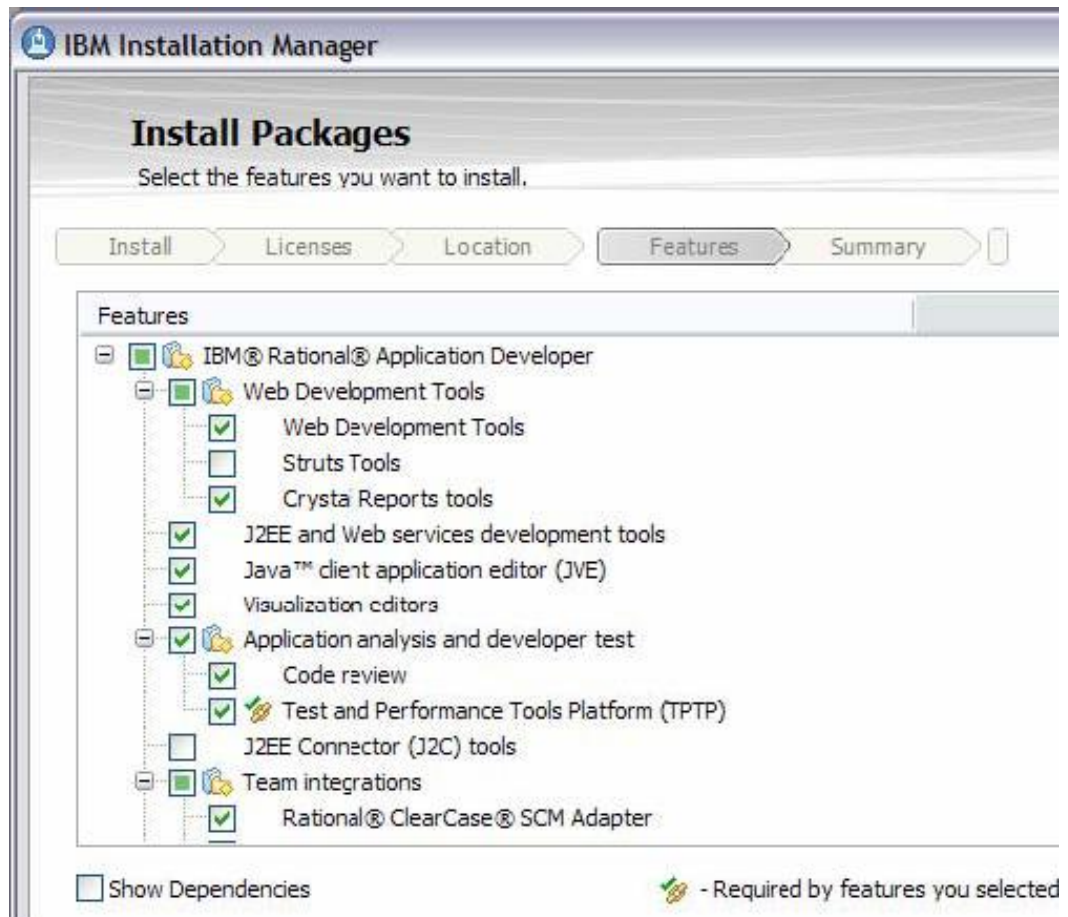

14. Accept the default settings and finish the installation.
15. After the Installation Manager installs, you should see the panel in Figure 8.

**Figure 8. Installation Manager**

16. Check **Rational Application Developer** and all other check boxes, then click **Next**.
17. Accept the default instructions for all panels until you arrive at the Install Packages window to install specific features, as shown below.

**Figure 9. Rational Application Developer Features**

18. This is where you select all features to be installed in your workbench. If you want to explore all that Rational Application Developer has to offer, check everything.
19. Click **Next**.
20. Click **Install**.

You have now successfully installed Rational Application Developer. The next step is to install DB2 Enterprise v9.0, as described in the next section.

---

## Section 3. DB2 Enterprise v9.0 installation and setup

To install and set up DB2 Enterprise v9.0:

1. Navigate a Web browser to <http://www.ibm.com/developerworks/downloads/im/udb>, as shown below.

## Figure 10. DB2 trial download

2. Select the **Multiplatform** link.
3. Follow the same sign in procedure described in the first section.
4. If you are running a 32-bit Windows machine, select the following download:

**Figure 11. Download Selection**

<input checked="" type="radio"/> <b>DB2 Enterprise 9 for Windows on 32-bit AMD and Intel systems (x86)</b> Version 9  Languages: English	Windows	download
--	---------	----------

5. In the browser, click **Continue**.
6. You might be asked to fill in more information about your use of DB2. After completing the information, click **I confirm**.

7. Check the box **DB2 Enterprise 9 for Windows on 32-bit AMD and Intel systems (x86)**.

**Figure 12. Download Selection**

8. Follow the Download Director instructions to finish the installation.
9. Navigate to the location of the downloaded files.
10. Expand db2\_v9\_ese\_win\_32 > image, and double-click the **setup.exe** file.

**Figure 13. Setup**

11. From the menu, select **Install a Product**.

**Figure 14. Install a product**

12. In the DB2 Enterprise Server Edition section, click **Install New**.

### Figure 15. DB2 Install New Enterprise Server

#### DB2 Enterprise Server Edition

DB2 Enterprise Server Edition is designed to meet the data server needs of can be deployed on Linux, UNIX, or Windows servers of any size, from one C

DB2 Enterprise Server Edition is an ideal foundation for building on demand as large data warehouses of multiple terabyte size or high performing 24x7 processing business solutions, or Web-based solutions. DB2 Enterprise S XML data store and delivers flexible access to XML data using XQuery, XPath tools.

Optional features for DB2 Enterprise Server Edition are available that provide capabilities in areas such as database partitioning, performance, security, c administration. Please see <http://www.ibm.com/db2> for more information.

**Install New**

13. Follow the wizard to finish the installation of DB2 Enterprise Server.
14. Once you click **Finish** on the final page, you are done installing DB2 Enterprise Server.

You can optionally install the DB2 Client to work with the server, but it is not covered in this series (you will use Rational Application Developer instead).

---

## Section 4. WebSphere Application Server V6.1 installation and setup

To install and set up WebSphere Application Server V6.1:

1. Begin downloading by navigate a Web browser to <http://www.ibm.com/developerworks/downloads/ws/was>, as shown below.

**Figure 16. Trial download page**

### Trial: WebSphere Application Server V6.1

**Download** | Software Evaluation Kit DVD

You can try this product as a download or on a [DVD](#).

**Trial download**

The evaluation period for this trial is 60 days. All of the product's features are enabled.

**Requirements**

→ [System requirements](#)

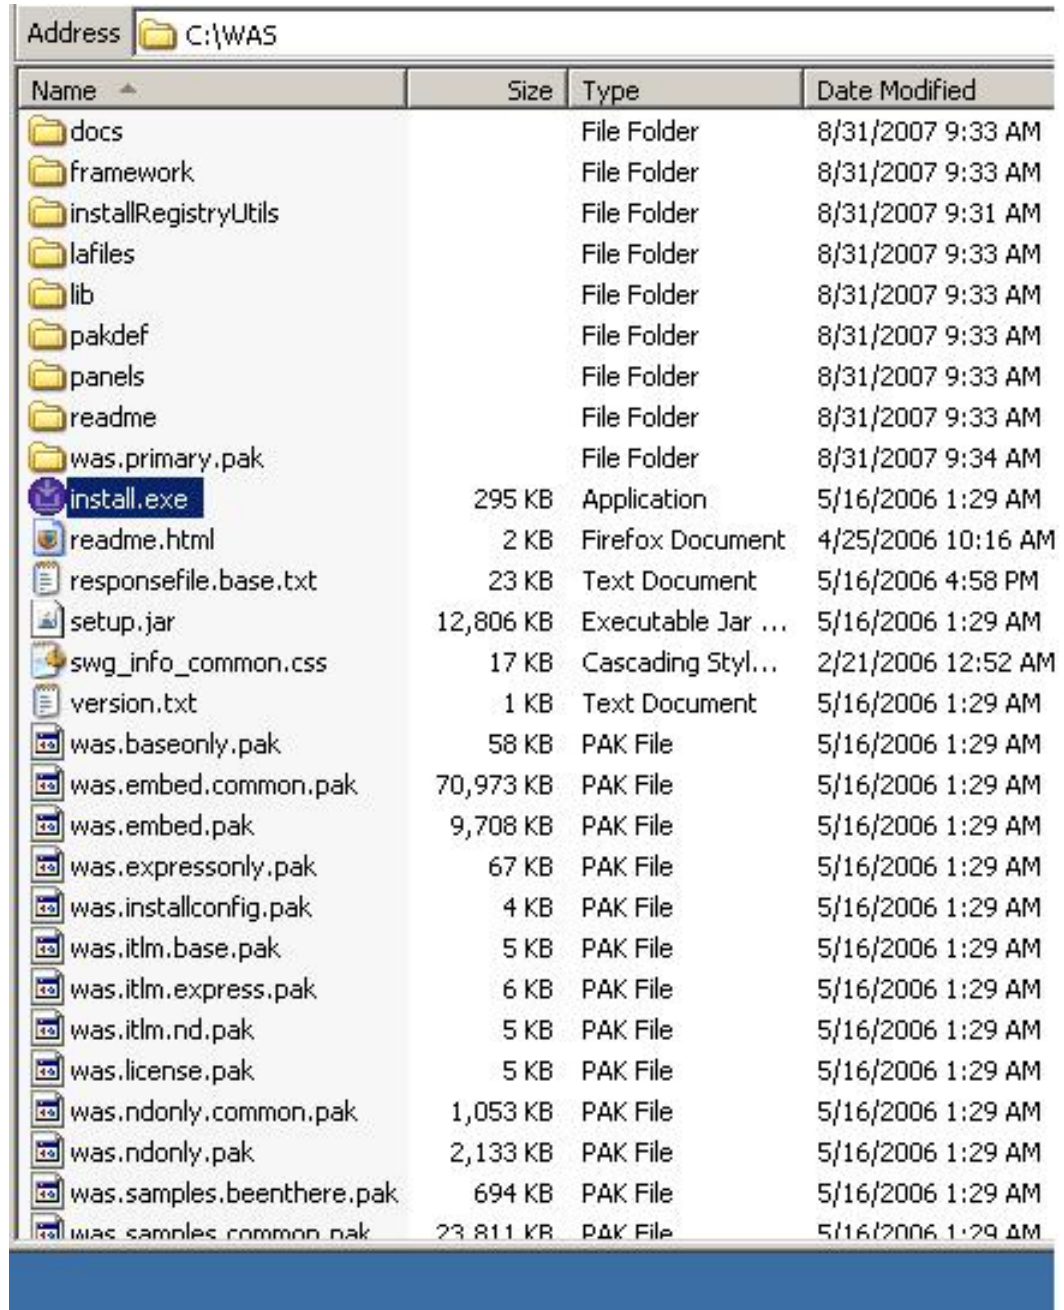

Note: The estimated download time over a 1.5Mbps connection is 58 minutes. We recommend that you use Download Director, which requires a Java-enabled browser, provides pause-and-resume capability for large downloads, high-speed transfer, and file access through firewalls.

Operating system	Version	Size	Download method
<a href="#">Linux®</a> Linux x86Series	V6.1	517MB	HTTP   Download Director
<a href="#">Windows®</a> Windows 2000, Windows NT®	V6.1	520MB	HTTP   Download Director

2. Click the **Multiplatform** link.
3. Click the **Windows** link.
4. Again, you may be prompted to fill in additional information.
5. Use the Download Director to download the installation files onto your machine.
6. Navigate to the location of the downloaded files.

7. Unzip was.cd.6100.trial.base.windows.ia32.zip.
8. Expand the **WAS** folder.
9. Double-click **install.exe**.

**Figure 17. WebSphere Application Server install.exe**

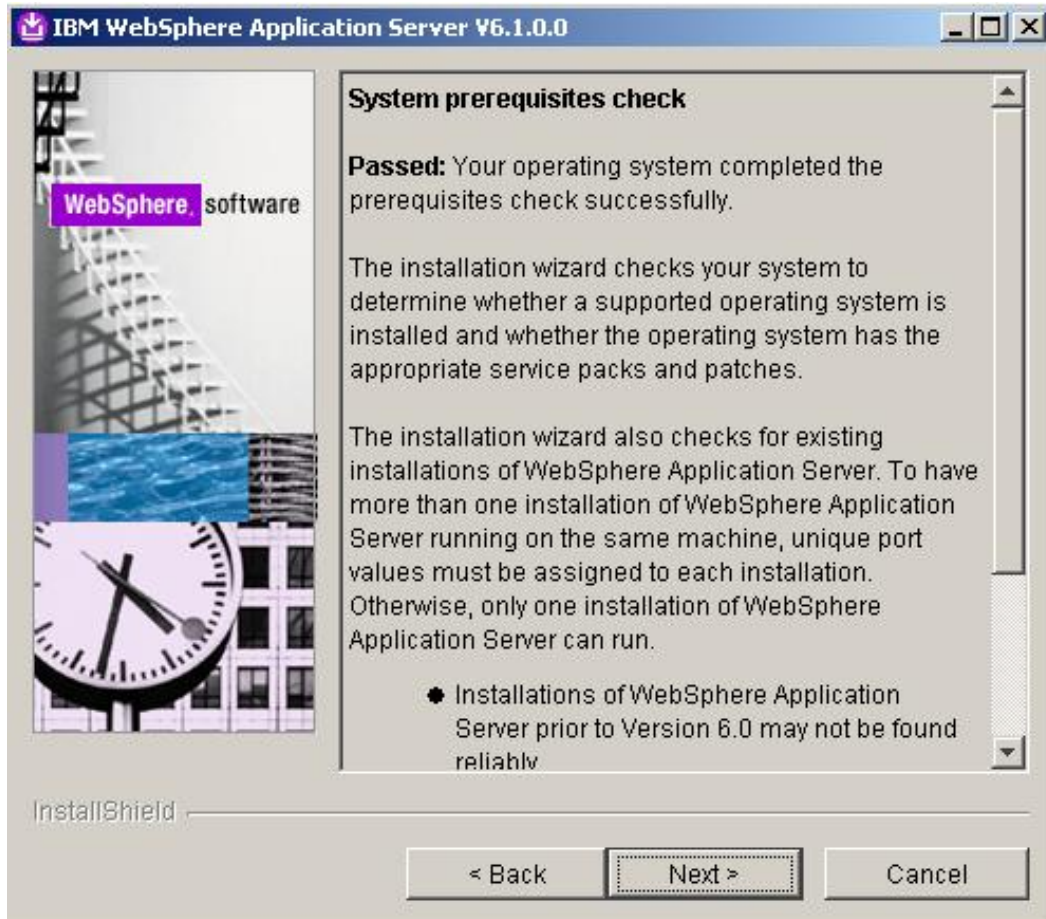

10. The WebSphere Application Server install wizard opens.

**Figure 18. WebSphere Application Server install wizard**

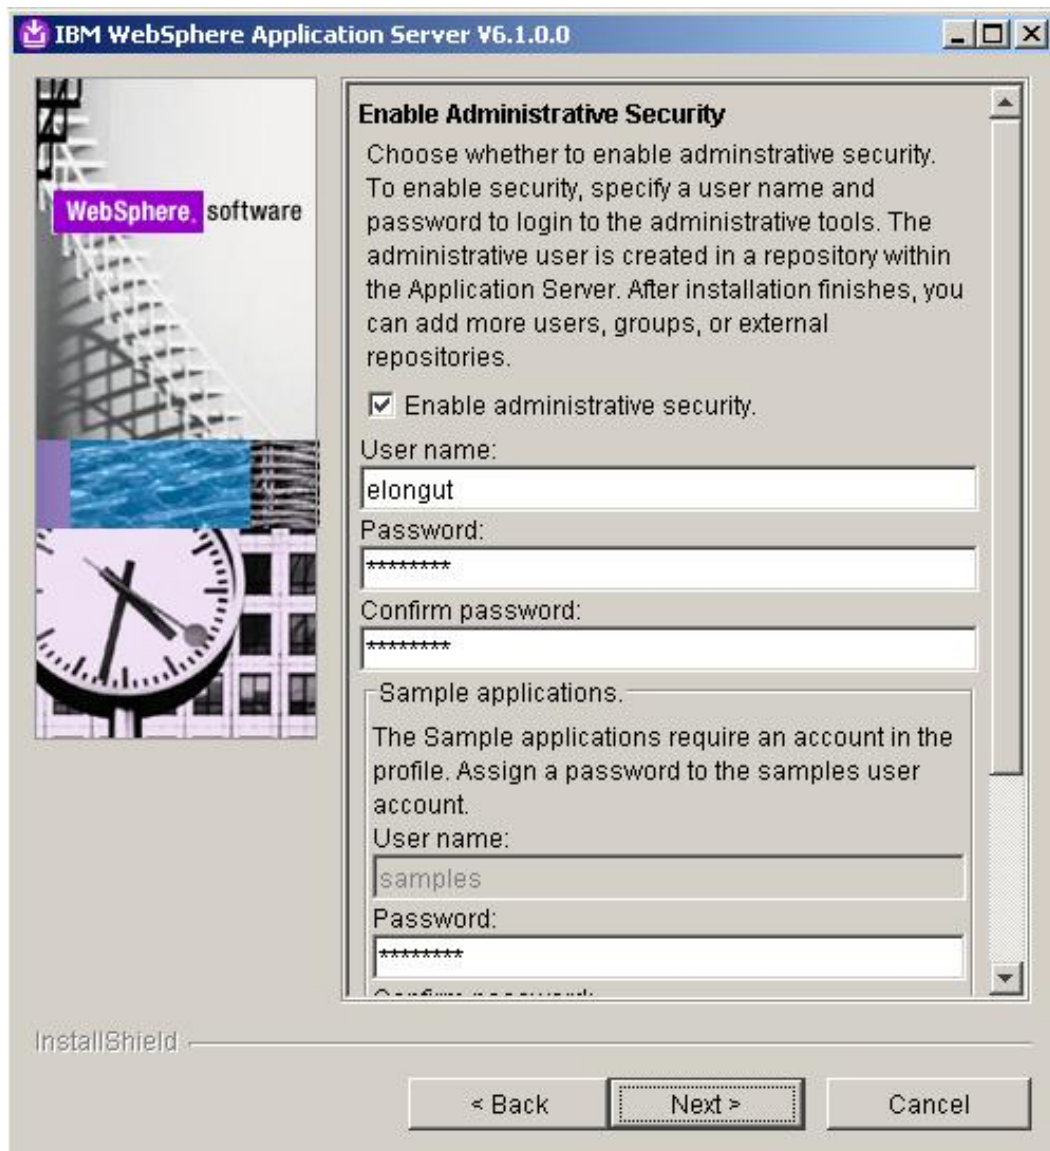

11. Click **Next**.
  12. Accept the terms, and click **Next**.
  13. Ensure that your system passed the system prerequisites.
- Figure 19. System prerequisites check**

14. Click **Next**.
15. Check the **Install the sample applications** box.
16. Click **Next**.
17. Accept the default installation location.
18. Click **Next**.
19. It's a good idea to enable administrative security at this point. You must assign a password for the sample application.

**Figure 20. Administrative security**

20. Click **Next**.
21. Review the summary and click **Next**.
22. WebSphere Application Server is now installed on your machine. You can optionally check the **Start first steps** Web page box and explore the features of WebSphere Application Server V6.1.
23. Click **Finish** to complete the installation.

---

## Section 5. Conclusion

Congratulations! In this tutorial you installed and set up Rational Application Developer for WebSphere Software, DB2 Enterprise v9.0, and WebSphere Application Server.

In Part 2 of this series you will learn how to build, from scratch, a Web application that connects to a DB2 database and is published on WebSphere Application Server, without writing a single line of code.
